

I. Basic info

- I do have a preferred nickname such as Kam but it doesn't really matter to me if it's used or not so either way it's fine!
- I took interest in having Computer Science as my major because from very little I've taken interest in computers. One day my older brother once showed me his animation creations and made me try the video games that he liked. From that very moment I was enthralled on the really unlimited things that one could do with a computer and now, I want to dive even deeper into the benefits and possible consequences of this "limitless" resource.
- Some of my concerns aren't based on a result due to coming to Florida Southern college but I will say that one of my top concerns is staying on track with every class as the semesters progress and not be found in a position where I'm behind ever. I, also am concerned about how efficiently can I handle maintaining a good sleep schedule, meet my expectations of what I consider "good grades", develop passion projects for companies to demonstrate not only my desire and interest in Comp Sci–Cybersecurity–but also work at the same time to be able to fund dream things that I want, like a car or even covering some of my tuition bill for upcoming semesters.
- I've imagined and dictated that having things such as Study plans/schedules will help me a lot when things get rough and making sure I adapt and make a habit of it as soon as possible will take away unnecessary bumps on my way.

II. Mindset

- I thought that this video is very relatable with what I'm trying to avoid during these times in college, I don't want to shy away from certain things and I don't want to "wither" away when faced with the inevitable challenges whether; life, academics or work.
- I learned the difference between closed and growth mindsets and how it can be useful to apply both of them depending on the situation. And it will inevitably be better for me to adopt a growth mindset when it comes to lessons and have a positive fixed for when it really matters
- This video will definitely help me with my studies because it gave me a new perspective on how to properly address and how to react and what mentality to code switch to when faced against very hard challenges.

III. Reflection

- One thing that I would say that went relatively well for me this week was locating where my classes are relatively fast and remembering what classes I have on which days because I've only gotten lost one time and that was when I was trying to find my statistics class (lol)
- One of my internal challenges that I'm still trying to overcome is to strengthen my discipline and to not let my mind persuade me into procrastinating. How I'm planning on getting rid of this is by being very rigorous on the amount of time I can let myself relax after studying or finishing an assignment and I'm adapting to studying habits so that I can more efficiently learn and apply my knowledge to passion projects.
- It would be about the same concerns as I'm sure that I will be dealing and carrying along with this nervousness until I graduate, realistically. But more specifically I will actually be getting homework and I don't have much time to develop and apply these study habits and how to efficiently manage my time.
- I plan on foolproofing my schedule to that I can manage my academics, social life and personal time plus work at the same time if I decide to go through with my internships
- I am currently writing a personal blog about every single day of my college experience with no if's, but's or and's. I find it pretty fun and a way where I can also keep my mental fortitude up!
